- New road markings
- Full traffic management
- Engagement with client
- Interface with residents, business users, the public and other stakeholders
- Project supervisor construction stage (PSCS) health and safety management

NORTHWOOD CARRIAGEWAY RESURFACING

OVERVIEW

Northwood Business Park engaged IUS to resurface circa 10,000 square meters of worn road surface throughout the Business Park.

DESCRIPTION

The project involved resurfacing in the region of 10,000 square meters of tarmac road surface in the Northwood Business Park.

IUS managed the project from commencement through to completion, engaging with the customer and all stakeholders. This included the business users, residents and members of the public. This engagement resulted in controlling access, limiting inconvenience and a reduction in adverse impact during the duration of the works.

Manholes and street furniture were raised to the new road levels with excess materials and waste safely and responsibly removed to landfill, to meet both our clients and IUS environmental regulations.

IUS controlled all Traffic Management, in conjunction with the Northwood Business Park, with exemplary professional standards maintained and no issues recorded.

New bollards, traffic calming measures and road markings were installed to bring the area up to a high specification.

All works were completed on time, to quality standards and within the project budget.
